There is something in the air ...

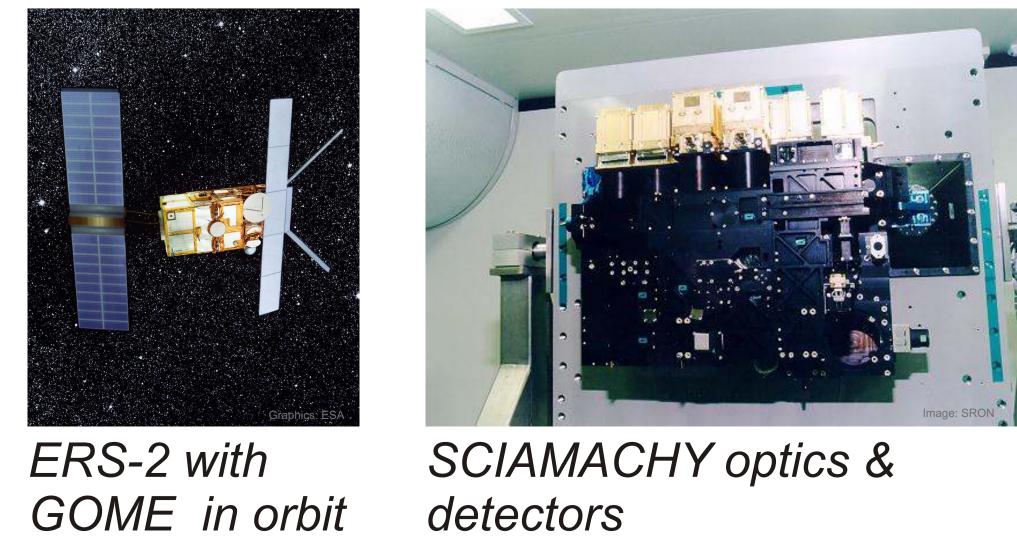

Global Satellite Measurements of Air Pollution, Greenhouse Gases and Ozone

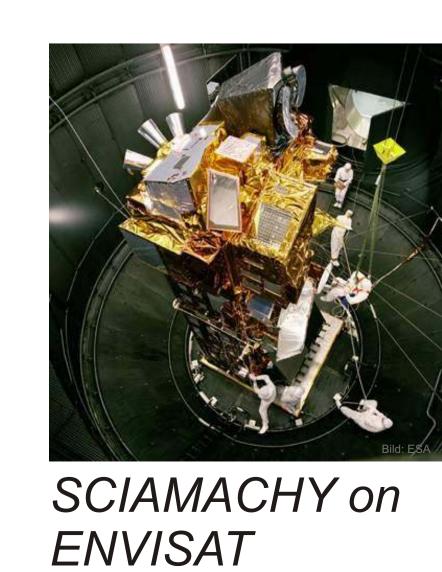

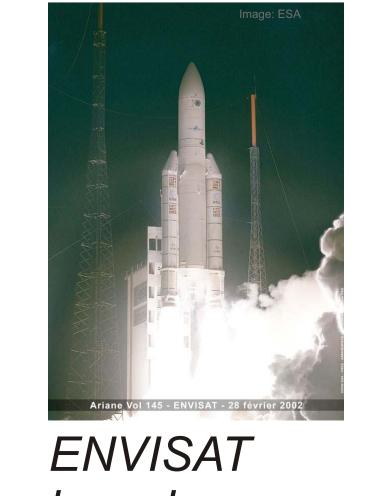

This map has been created at the Institute of Environmental Physics, University of Bremen, Germany. It uses data products retrieved from measurements made by the satellite instruments GOME (on ERS-2), SCIAMACHY (on ENVISAT) and GOME-2 (on METOP), which are operated by ESA and EUMETSAT. SCIAMACHY is a national contribution to the ENVISAT mission, funded by Germany (DLR), The Netherlands and Belgium. The background map of the Earth has been generated from MODIS data (courtesy of NASA).
